

# Module

Frappe comes equipped with numerous built-in modules. For instance:

- **Core:** This module encompasses DocTypes like DocType, DocField, Report, System Settings, and more.
- **Desk:** Here, you'll find DocTypes such as ToDo, Event, Note, Kanban Board, among others.
- **Email:** This module contains DocTypes like Email Account, Newsletter, Email Group, etc.

The controller files generated by a DocType are stored in the respective Module directory.

## Key Insights:

1. **Grouping Mechanism:** Modules serve as a mechanism to group related models, making it easier to navigate and manage them.
2. **Built-in Modules:** Frappe provides several pre-defined modules, each containing a set of related DocTypes.
3. **Directory Structure:** Beyond just logical grouping, modules also dictate the physical organization of code files in the Frappe directory structure.
