

# Transfer Fixtures

## ▼ Create a Custom App

To transfer the fixtures (which might contain Print Format, Custom Fields, etc.), you need to have a Custom App to contain the fixtures.

After creating the custom app, first step is to add the fixtures to the app's `hooks.py`:

```
...  
fixtures = ["Print Format"]  
...
```

## ▼ Export Fixtures

```
cd /path-to/your-bench  
bench export-fixtures
```

The fixtures should now be visible in a new folder on your app directories

## ▼ Push/Update App to Github

Refer to [Git Management](#) page

## ▼ Install the App to the Site

## ▼ Remove the App (if necessary)
