

Architecture

Frappe uses virtualenv to establish isolated environments for various Python versions, allowing deployment of sites with different Frappe versions. The architecture is structured around the `frappe-bench` directory, which interfaces with different components of the stack.

Key Insights:

- Comprehensive Framework:** Frappe offers an all-inclusive environment, from database to real-time notifications, ensuring a seamless deployment experience.
- Isolated Environments:** Leveraging Python's virtualenv, Frappe ensures isolated setups, allowing multiple versions to coexist.
- Structured Setup:** The `frappe-bench` directory is central to Frappe's architecture, interfacing with various components and ensuring organized deployment.
