

# Add Navbar Menus

To add a navbar menu item, we need to edit the `Website Settings` single doctype. This can be done through Desk (manual insert) or using a custom Python script.

To use Desk, just go to `Website Settings` and add the menu item on the `Navbar` section.

E > Website > Website Settings Search or type a command (Ctrl + G) Help A

☐ Include Search in Top Bar

☐ Show Language Picker

View Website Clear Cache ... Save

To add it programmatically, we can use a custom Python script to edit the Website Settings' `top_bar_items` and run it on a certain event using `hooks.py`.

```
def navbar_add_products_link():
    website_settings = frappe.get_doc("Website Settings")
    if website_settings.top_bar_items:
        return

    website_settings.append(
        "top_bar_items",
        {
            "label": _("Products"),
            "url": "/all-products",
            "right": False,
        },
    )

    website_settings.save()
```
